Email security baseline

Seven basics for every small business email account

Business: _____ Date: _____

- [ ] **MFA for every user.** Turn on multi-factor authentication for all accounts.
- [ ] **MFA for admins.** Multi-factor authentication matters most on admin accounts.
- [ ] **Block legacy sign-in.** Most compromising sign-in attempts come from legacy authentication, which can't use MFA.
- [ ] **Read your DMARC reports.** Start at p=none with reporting and find the senders you forgot.
- [ ] **Offboard properly.** Suspend leavers' accounts, change shared passwords and delegate the mailbox.
- [ ] **Keep a separate emergency admin account** with strong MFA.
- [ ] **Check retention and backup.** Deleted mail is not kept forever; decide whether you need an archive or third-party backup.
