# Decision checklist for small teams

Use this before adding or replacing any piece of infrastructure.

Project: Date:

- [ ] **Objective:** can we state in one sentence what this is for?
- [ ] **Workload:** is this an app, a content site, an online shop or internal tooling?
- [ ] **Existing assets:** have we checked our current people, software and infrastructure first?
- [ ] **Ownership:** who will set it up, maintain it and fix it at short notice?
- [ ] **Fit:** does it do one clear job in our stack, or overlap with something we already have?
- [ ] **Terms:** does the plan allow commercial use, and what happens when we hit a free-tier limit (pause, suspend or bill)?
- [ ] **Location:** where will it run and store data, relative to our users and our other services?
- [ ] **Cost and timing:** do our current traffic and needs justify paying now, and what will it cost at renewal and as usage grows?
- [ ] **Exit:** if we outgrow it, can we export our data and move?
